Miyagi MyMatric — Site Architecture & Visual Flow

A structured walkthrough of every route, its purpose, and the ideal user journey — designed to help product designers and content strategists reimagine the MyMatric experience in Gamma's visual format.

SITE OVERVIEW

What Is Miyagi MyMatric?

Miyagi MyMatric is a South African matric study platform built to guide Grade 12 learners from first visit all the way through to exam-ready confidence. The platform is structured around a smart assessment that profiles each learner — their subjects, intensity preferences, and study readiness — then generates a fully personalized study plan.

Every route on the site has a clear job to do: orient the new visitor, capture learner data, surface actionable study tools, and reinforce consistent study habits through streaks, countdowns, and subject-level tracking.

- **13 distinct routes** covering the full learner lifecycle
- Anchored by a **6-section guided assessment** at the core
- Supports IEB, NSC, and CAPS curricula
- Built for zero-rated access — equity by design

Platform Purpose

Turn every South African matric learner into a confident, exam-ready student — regardless of school resources or internet access.

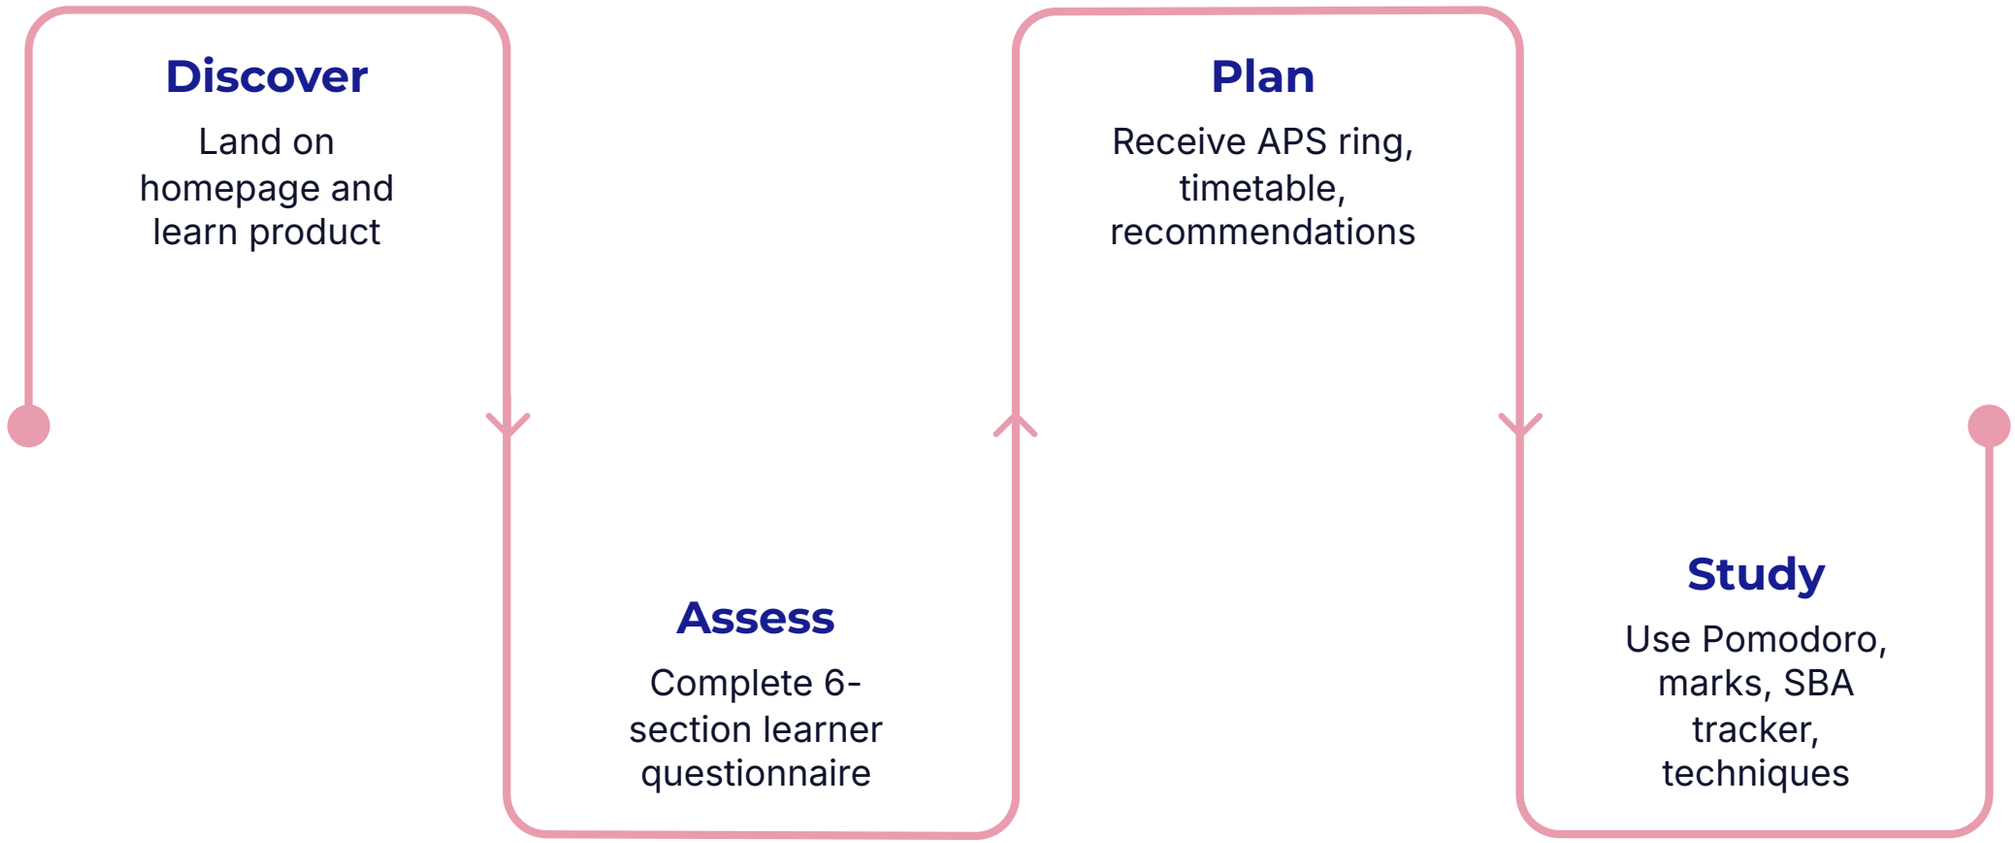
Core Loop

Assess → Plan → Study → Track → Repeat

USER JOURNEY

The Ideal Flow: From Landing to Learning

New visitors move through a deliberate, low-friction funnel. The site earns trust before asking for commitment — leading with clarity, then guiding learners into the personalized experience.



This four-stage flow maps directly to the site's route structure. Every page exists to serve one of these stages — there is no dead-end content and no orphaned pages. The assessment is the pivotal hinge between discovery and action.

ENTRY POINTS

Discovery Routes: Getting Learners In

/ — Landing Page

The public entry point. Its single job is to explain the product clearly and drive visitors toward the assessment. Value proposition, social proof, and a strong CTA above the fold.

/how-it-works

Explains the 5-step journey for first-time visitors who need more context before committing to the assessment. Reduces drop-off by pre-answering "what will happen to me?"

/subjects

A subject strategy guide covering all 8 subjects across IEB and CAPS. Functions as both a discovery page and a pre-assessment warm-up, surfacing relevant content before the learner profile is created.

ASSESSMENT

The Assessment: Heart of the Platform

/assessment

A 6-section guided questionnaire that collects everything the platform needs to generate a fully personalized learner profile and study plan.

What It Captures

- Subject selections and curriculum type
- Target APS score and university goals
- Current marks per subject
- Study intensity preference (3 modes)
- Available study hours per day
- SBA and exam deadline awareness

The assessment is the platform's most important conversion moment. It transforms an anonymous visitor into a named learner with a plan. The 6 sections are carefully sequenced — each section builds on the last, keeping cognitive load low while collecting rich data.

Once complete, the learner is immediately routed to their personalized **/dashboard**, where their APS ring, streak counter, upcoming deadlines, and recent marks are all waiting. The transition from assessment to dashboard should feel instant and rewarding — like the platform already knows them.

Completion of the assessment unlocks the full platform experience — timetable, SBA tracker, Pomodoro timer, and marks entry.

CORE APP

Dashboard & Daily Command Center

The **/dashboard** is the learner's home base after onboarding. It surfaces everything that matters at a glance — no hunting, no friction.

APS Ring

A live visual of the learner's current Admission Point Score, updated as marks are entered. Motivating and immediately legible.

Exam Countdown

Days remaining to key exams and SBA deadlines, keeping urgency present without being overwhelming.

Study Streak

A daily streak counter that rewards consistency. One of the platform's core habit-reinforcement mechanisms.

SBA Alerts

Smart callouts when SBA submissions are approaching, ensuring learners never miss a school-based assessment deadline.

STUDY TOOLS

The Study Suite: Four Focused Tools

Once inside the platform, learners access four purpose-built study tools — each designed to address a distinct need in the study routine. Together, they form a complete daily workflow.

1

/timetable

An auto-generated weekly study grid built from the learner's assessment data. Subjects, sessions, and intensity are all pre-populated — learners can start studying immediately, no manual planning required. Three intensity modes (light, moderate, intensive) adapt the schedule to exam proximity.

2

/pomodoro

A clean 50/10 focus timer — 50 minutes of deep work followed by a 10-minute break. Embedded directly in the platform so learners never need to leave to manage their sessions. Supports sustained concentration without burnout.

3

/marks

A subject-level marks entry tool with a live APS calculator. Learners enter test and exam results per subject; the dashboard APS ring updates in real time. Makes abstract score targets feel tangible and trackable.

4

/sba

The SBA task tracker monitors submission deadlines, completion status, and urgency levels across all subjects. Color-coded alerts distinguish between upcoming, due-soon, and overdue tasks — keeping learners ahead of their school-based assessments.

REFERENCE

Study Techniques & Resources

Two content-rich reference routes support deeper learning beyond the daily tools.

/techniques — A curated guide to high-impact study methods: active recall, the Feynman technique, spaced repetition, and more. Each technique is explained with practical application tips specific to matric subjects.

/resources — A zero-rated South African resource directory. Past papers, model answers, and curriculum guides — all sourced from platforms accessible without data costs. A deliberate equity feature for learners in under-resourced schools.

> Zero-rated access means learners on qualifying networks can use these resources without consuming mobile data.

INFORMATION ARCHITECTURE

All 13 Routes at a Glance

Every page in the MyMatric ecosystem has a defined role. This table maps each route to its purpose and its position in the user journey — useful for auditing content gaps or planning Gamma card equivalents.

#	Route	Purpose	Journey Stage
1	/	Landing page — public entry point, explains the product, drives to assessment	Discover
2	/how-it-works	Explains the 5-step journey for first-time visitors	Discover
3	/assessment	6-section guided questionnaire — generates learner profile + APS	Assess
4	/dashboard	My Plan — APS ring, exam countdowns, streak, recent marks, SBA alert	Plan
5	/timetable	Weekly study grid — auto-generated from assessment, 3 intensity modes	Study
6	/sba	SBA task tracker — deadlines, submission status, urgency alerts	Study
7	/pomodoro	50/10 focus timer	Study
8	/marks	Mark entry per subject + live APS calculator	Track
9	/subjects	Subject strategy guide — 8 subjects, IEB/CAPS callouts	Discover
10	/techniques	Study techniques reference — recall, Feynman, spaced repetition etc.	Study
11	/resources	Curated SA resource directory — zero-rated platforms, past papers	Study
12	/privacy	POPIA Privacy Notice	Trust
13	/terms	Terms of Use	Trust

✧₊ DESIGN RECOMMENDATIONS

Recommended Gamma Flow for MyMatric

When recreating this site architecture as a Gamma presentation or document, mirror the live site's warm, encouraging visual tone — soft pinks, deep navy, and clean white space. Each card should map to a single route or stage in the journey.

1

Hero Card

Mirror the / landing page: bold promise, APS ring visual, single CTA to assessment

2

How It Works

Diagram card showing the 5-step journey — clean, sequential, confidence-building

3

Assessment Flow

Walk through the 6 sections as an interactive or annotated infographic

4

Tool Showcase

One card per major tool (Dashboard, Timetable, Marks, SBA) with screenshots and copy

Use **#E89CAE** (warm pink) for primary CTAs and highlights, **#2F339A** (deep navy) for section anchors, and **#B2B5DE** (soft lavender) for supporting accents — matching the live site's palette exactly.
